

# Saba Cloud Marketplace

Saba Marketplace makes connecting Saba Cloud to third-party applications and resources as easy as drag, drop, and done. Marketplace features a set of tested, preconfigured connectors so you can connect Saba Cloud to your HRIS, CRM, job boards, screening services, and the latest learning content in minutes, not days or weeks.

## Benefits

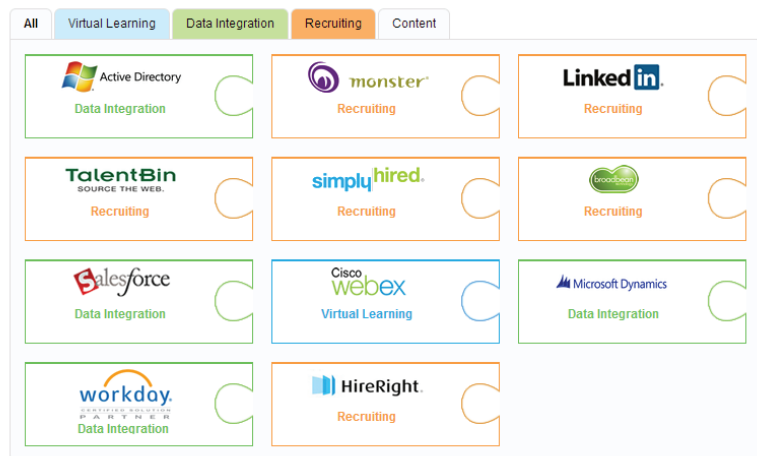

- Accelerate deployments of talent management and associated programs
- Easily import third-party content
- Access a library of microapps to build and extend the Saba platform
- Improve processes and reporting with data synchronized across your HRIS, CRM, Talent Management and other systems
- Reduce or eliminate the dependency on IT to connect systems and load content

## Features

- Tested, pre-configured connectors for system integration, job boards, screening services, learning content, virtual classroom, microapps, and more
- Simple, three step drag and drop integration process
- Audience control for microapps

## Quick and easy connections to content, services, and systems

Organizations usually employ more than one system or service to manage their business and their people. Saba Marketplace enables companies to get information from other systems into Saba Cloud—faster and more efficiently than any other talent management system can. When data is exchanged smoothly—especially when the setup is this fast—your people can get back to being productive.

## Drag, drop, and done.

Until now, connecting disparate systems has been a time-consuming and complex proposition. Saba Marketplace, with its drag-and-drop functionality, radically simplifies the process of connecting third-party applications and services to Saba Cloud. Browse through dozens of applications, services, content, and system connectors. Then drag the new application or service and drop it into your Saba Cloud. For some applications, you can fine-tune delivery options and map data fields between systems with Marketplace's point-and-click user interface. Saba Marketplace not only accelerates deployments, but by making the connection process as easy as drag and drop, Saba Cloud customers can also respond quickly to shifting business needs — adding learning content, job boards, and even connecting new systems in minutes, not days or weeks.

## Expand your talent ecosystem in three easy steps.

- 1 Drag and drop the connector.
- 2 Provide login information.
- 3 Confirm field mapping. Update if needed.

Service	Benefit
HRIS	Keep your learning, talent, and enterprise systems synchronized.
CRM	Train, coach, and develop sales personnel in the system where they spend much of their time. Identify top performers and replicate their activities across the sales force to increase revenue.
Learning Content	In minutes, enhance or create new learning programs by browsing, purchasing, and transferring content bundles from leading eLearning providers, such as Open Sesame and Lynda.com, all from within Saba Marketplace.
Virtual Learning	Integrate Saba Cloud with your existing virtual learning provider, simplifying the setup and access to virtual classrooms.
Job Boards and Talent Search Services	Connect with multiple talent boards to immediately expand the reach of your job requisitions.
Hiring Services	Embed screening services into your candidate tracking and evaluating process. Add Adobe's eSignature capabilities to manage forms and signatures during the hiring process.
Microapps	Our developers and partners continue to develop plug-ins and other microapps for Saba Cloud that extend Saba's capabilities to meet specific business requirements. Microapps are available to all Saba Cloud customers in the Saba Marketplace—browse, select, and implement. Control which end users have access to any implemented microapp.
